storyforge-livid.vercel.app · homework-saathi.onrender.com · github.com/pradyumn

SUMMARY

MBA with a year of product work at ConveGenius.ai, currently Product Associate, building AI learning products for K-12 users on low cost Android devices. Owns features end to end: user discovery, PRDs and user stories, Figma flows, working prototypes in code, and iteration once the usage data comes back. Also ships tools outside work. StoryForge turns stakeholder notes into an INVEST reviewed backlog and creates the epics and stories in Jira Cloud over REST API v3. Homework Saathi is a Hindi voice and text assistant built on retrieval over NCERT Grade 5 and 6 maths textbooks. Looking for an Associate Product Manager role on a consumer or SaaS team.

PRODUCTS BUILT AND SHIPPED

StoryForge / Requirements to Jira Automation

Solo · Live

storyforge-livid.vercel.app | API docs: storyforge-lsnr.onrender.com/docs | github.com/pradyumn/storyforge

- Built a tool that takes a raw discovery transcript or stakeholder notes and returns a business requirements document, an INVEST reviewed backlog and a gap report, then creates the epics and stories directly in Jira Cloud through REST API v3.
- Structured the pipeline as five agents (intake, requirements, stories, review, gaps) with a bounded revise loop, so stories that fail review get rewritten automatically before a person reads them.
- Wrote a traceability guardrail that rejects any requirement whose evidence quote does not appear word for word in the source notes. It held invented requirements to 7 percent on the test set.
- Built the FastAPI service with background job endpoints (POST /api/analyze/start, GET /api/jobs/{id}) so multi minute model runs never block a request, plus export endpoints for BRD, backlog and Jira CSV. Jira writes are idempotent and have a dry run mode that prints the exact REST payload.
- Scored quality on a golden set of 8 transcripts, 83 labelled requirements and 16 distractor sentences: 82 percent requirement recall, 75 percent precision, 98 percent traceability. 47 tests run in CI. Deployed on Render with the UI on Vercel.

Homework Saathi / Hindi Voice and Text Assistant

Solo · Live

homework-saathi.onrender.com | Retrieval augmented generation over NCERT Grade 5 and 6 mathematics

- Built a Hindi voice and text assistant that helps parents of Class 5 government school children check and explain maths homework, answering from the NCERT textbook rather than generating freely.
- Set the positioning after user conversations: the person actually stuck is the parent who cannot verify the work, not the child, so the product coaches the parent instead of tutoring the child.
- Wrote a refusal policy that declines out of scope questions rather than guessing. It answers 87 percent of legitimate questions at a 1.1 percent error rate and refuses 13 percent on purpose, which is the right trade when a parent is going to repeat the answer out loud.
- Runs at zero marginal cost on free tiers (Bhashini speech, BGE M3 embeddings, Groq inference) and fetches source pages on demand instead of storing copyrighted content.

Mathematics Game Library, Grades 3 to 5

ConveGenius.ai

- Shipped a set of browser based maths games, each mapped to one learning outcome, with adaptive levels and self correcting feedback, built for a near zero text interface and low bandwidth Android devices. The mastery progression rule (start at your own level, move up on demonstrated competence) became the default pattern for later modules.

EXPERIENCE

Product Associate, ConveGenius.ai

Noida (On-site) · Feb 2026 to Present

- Own early grade mathematics modules through the full product lifecycle: discovery, PRD, spec, build, launch and post release iteration, working in two week Agile sprints with engineering, design and curriculum.
- Write PRDs, user stories and acceptance criteria, prioritise the backlog, and act as the single point of contact for scope, trade offs and launch readiness.
- Define the metrics for each module (activation, completion, drop off, engagement), instrument the pilots, and use what the data shows to change difficulty progression and UX.
- Run user research and usability tests with children and teachers in live classrooms and turn the findings into prioritised requirements.
- Design flows and interfaces in Figma, maintain a shared component library, and prototype in HTML5, CSS3 and JavaScript so concepts get tested before engineering time is committed.

Product and Content Design Intern, ConveGenius.ai

Noida (On-site) · Jul 2025 to Jan 2026

- Shipped AI assisted interactive learning products for K-12 learners using LLM workflows and prompt engineering, and set the quality bar for reading level, cultural context and conceptual accuracy.
- Wrote PRDs, user stories and learner journey maps that kept curriculum, design and engineering aligned each sprint, and analysed pilot metrics to find drop off and prioritise fixes.

SKILLS

Product Management: Product Lifecycle, Product Discovery, PRDs, User Stories, Acceptance Criteria, Gherkin, INVEST, Requirement Gathering, Backlog Prioritisation, Product Roadmap, Feature Scoping, Product Launch, Competitive Research, Stakeholder Management, Cross-functional Collaboration

APIs and Integration: REST APIs, API Integration, Jira Cloud REST API v3, FastAPI, JSON, Schema Validation, Background Job Endpoints, Idempotent Writes, Rate Limiting, API Documentation, Postman style API testing

Research and Data: User Research, Usability Testing, Customer Feedback Analysis, Pilot Instrumentation, Product Analytics, Funnel and Drop Off Analysis, KPI Definition, Evaluation Harness Design, Data Driven Decision Making

AI: LLM Application Workflows, Prompt Engineering, Retrieval Augmented Generation (RAG), Vector Embeddings, Agentic Pipelines, Guardrails, Model Evaluation, Gemini, Groq

Design and Build: Figma, Wireframing, Prototyping, User Journey Mapping, Design Systems, HTML5, CSS3, JavaScript, Python, Canvas API

Tools and Process: Jira, Confluence, Trello, Notion, Git and GitHub, GitHub Actions CI, Docker, Render, Vercel, Agile, Scrum, Sprint Planning, Google Workspace, Excel and Google Sheets

Domain: Consumer (B2C), B2B SaaS, EdTech, K-12, Foundational Literacy and Numeracy, Low Bandwidth Products for Bharat

EDUCATION

MBA, Mahatma Jyotiba Phule Rohilkhand University, Bareilly 2023 to 2025
BBA, Mahatma Jyotiba Phule Rohilkhand University, Bareilly 2020 to 2023
Languages: Hindi (native), English (fluent). **Mobility:** Open to relocation and field travel.
