

PRADYUMN AWASTHI

Associate Product Manager | Consumer and B2B SaaS | AI and API Driven Products

+91 87914 32596 · Pradyumnawasthi03@gmail.com · Bareilly, Uttar Pradesh · Open to Bengaluru, Delhi NCR, Mumbai, Hyderabad
storyforge-livid.vercel.app · homework-saathi.onrender.com · github.com/pradyumn

SUMMARY

Product Associate at ConveGenius.ai with 1.5 years across an internship and a full time role, owning AI learning products from discovery through launch: user research, PRDs and user stories, backlog prioritisation, Figma flows, and reading completion and drop off data to decide what changes next. Ships independently as well. StoryForge writes an INVEST reviewed backlog from stakeholder notes and creates the epics and stories in Jira Cloud via REST API v3. Homework Saathi is a Hindi voice and text assistant built on retrieval over NCERT maths textbooks. MBA, with enough Python and JavaScript to prototype a feature and hold a credible scope conversation with engineers.

EXPERIENCE

Product Associate, ConveGenius.ai Noida (On-site) · Feb 2026 to Present

AI led EdTech. K-12 learning products at government school scale.

- Own a set of early grade mathematics modules through the full product lifecycle: discovery, PRD, spec, build, launch and post release iteration, delivered to K-12 users on low cost Android devices in low bandwidth settings.
- Write PRDs, user stories and acceptance criteria, groom and prioritise the backlog with engineering and design across two week Agile sprints, and act as the single point of contact for scope, trade offs and launch readiness.
- Define the metric set for every module (activation, completion, drop off, engagement), instrument the pilots, and run the usage analysis that shows where learners stall. Those findings drive difficulty progression, UX changes and what goes on the roadmap next.
- Lead user research and usability testing with children and teachers in live classrooms, then convert the qualitative signal into prioritised, shippable requirements.
- Design product flows, wireframes and interfaces in Figma and maintain a reusable component library, which cut the time to spec and ship each new module. Prototype in HTML5, CSS3, JavaScript and Canvas API to test a concept before engineering capacity is committed.

Product and Content Design Intern, ConveGenius.ai Noida (On-site) · Jul 2025 to Jan 2026

- Shipped AI assisted interactive learning products for K-12 learners using LLM workflows and prompt engineering, and defined the output quality bar for reading level, cultural context and conceptual accuracy.
- Wrote PRDs, user stories and learner journey maps that kept curriculum, design and engineering aligned on scope each sprint, built wireframes and reusable components, and analysed pilot metrics to diagnose drop off and prioritise engagement fixes.

PRODUCTS BUILT AND SHIPPED

StoryForge / Requirements to Jira Automation Solo · Live

storyforge-livid.vercel.app | API docs: storyforge-lsnr.onrender.com/docs | github.com/pradyumn/storyforge

- Built a tool that turns a raw discovery transcript into a business requirements document, an INVEST reviewed backlog with Gherkin acceptance criteria and a gap report, then creates the epics and stories directly in Jira Cloud through REST API v3.
- Structured the pipeline as five agents (intake, requirements, stories, review, gaps) with a bounded revise loop, so stories that fail review get rewritten automatically before a person reads them.
- Wrote a traceability guardrail that rejects any requirement whose evidence quote does not appear word for word in the source notes. It held invented requirements to 7 percent on the test set.
- Built the FastAPI service with background job endpoints (POST /api/analyze/start, GET /api/jobs/{id}) so multi minute model runs never block a request, plus export endpoints for BRD, backlog and Jira CSV. Jira writes are idempotent and have a dry run mode that prints the exact REST payload.
- Scored quality on a golden set of 8 transcripts across 8 domains, 83 labelled requirements and 16 distractor sentences: 82 percent requirement recall, 75 percent precision, 98 percent traceability. 47 tests run in CI. Deployed on Render with the UI on Vercel.

Homework Saathi / Hindi Voice and Text Assistant Solo · Live

homework-saathi.onrender.com | Retrieval augmented generation over NCERT Grade 5 and 6 mathematics

- Built a Hindi voice and text assistant that helps parents of Class 5 government school children check and explain maths homework, answering from the NCERT textbook rather than generating freely.
- Set the positioning after user conversations: the person actually stuck is the parent who cannot verify the work, not the child, so the product coaches the parent instead of tutoring the child.
- Wrote a refusal policy that declines out of scope questions rather than guessing. It answers 87 percent of legitimate questions at a 1.1 percent error rate and refuses 13 percent on purpose. Runs at zero marginal cost on free tiers.

Mathematics Game Library, Grades 3 to 5 ConveGenius.ai

- Shipped a set of browser based maths games, each mapped to one learning outcome, with adaptive levels and self correcting feedback, built for a near zero text interface and low bandwidth devices. The mastery progression rule became the default pattern for later modules.

SKILLS

Product Management: Product Lifecycle, Product Strategy, Product Roadmap, Product Discovery, PRDs, User Stories, Acceptance Criteria, Gherkin, INVEST, Requirement Gathering, Backlog Prioritisation, Feature Scoping, Product Launch, Competitive Research, Stakeholder Management, Cross-functional Collaboration

APIs and Integration: REST APIs, API Integration, Jira Cloud REST API v3, FastAPI, JSON, Schema Validation, Background Job Endpoints, Idempotent Writes, Rate Limiting, API Documentation

Research and Data: User Research, Usability Testing, Customer Feedback Analysis, Pilot Instrumentation, Product Analytics, Funnel and Drop Off Analysis, KPI Definition, Evaluation Harness Design, Data Driven Decision Making

AI: LLM Application Workflows, Prompt Engineering, Retrieval Augmented Generation (RAG), Vector Embeddings, Agentic Pipelines, Guardrails, Model Evaluation, Gemini, Groq

Design and Build: Figma, Wireframing, Prototyping, User Journey Mapping, Design Systems, HTML5, CSS3, JavaScript, Python, Canvas API

Tools and Process: Jira, Confluence, Trello, Notion, Git and GitHub, GitHub Actions CI, Docker, Render, Vercel, Agile, Scrum, Sprint Planning, Google Workspace, Excel and Google Sheets

Domain: Consumer (B2C), B2B SaaS, EdTech, K-12, Foundational Literacy and Numeracy, Low Bandwidth Products for Bharat

EDUCATION

MBA, Mahatma Jyotiba Phule Rohilkhand University, Bareilly 2023 to 2025

BBA, Mahatma Jyotiba Phule Rohilkhand University, Bareilly 2020 to 2023

Languages: Hindi (native), English (fluent). **Mobility:** Open to relocation and field travel.
